MEAN

To find the mean of a number you must find the sum of all the numbers in the set of data. Then after adding up all the numbers you must divide the sum by the number of numbers you added up. (E.g. you add up 4 numbers together...you divide by 4). Then you have the mean (average) of the set of numbers.

Example

```
 4 | 1 3 9
 5 | 2 7
 6 | 7 8 9
 7 | 0 2 3 3 3 3 3 4 4 5 6 7
 8 | 1 2 2
 9 | 2 6
10 | 1 8
11 | 2 4
12 | 3
```

4 | 3   represents 43

Ans. 2320/30 = 77.3
