

MEDIAN

The median is the **MIDDLE** number in a rank of numbers.

To find the median, you list the numbers in order from least to greatest. Then select the number from the middle of the list. If there are two middle numbers, you take the two, add them together, and then divide by two to get the median.

For example, cross out numbers a pair at a time, one from the beginning and one from the end of the list; like this: 5, 6, 7, 8, 9. The median is 7.

A way to remember this: Median is the Middle, both words have six letters with a similar first three – Med is the Mid.
